

LANTECH LONGWAVE & IPFABRIC: NEW PARTNERSHIP

Lantech Longwave is pleased to announce our partnership with IP Fabric.

IP Fabric is a vendor-neutral network assurance platform that provides solutions enabling automatic network discovery, documentation, compliance checks, and lifecycle management.

As **Denni Ugolotti, Networking Business Manager at Lantech Longwave**, says:

"Partnering with IP Fabric is a strategic choice for Lantech Longwave - the goal is to enhance our networking proposition. Lantech Longwave, with its experience in delivering networking solutions since 2001, combined with IP Fabric's expertise, can now offer our customers more comprehensive networking solutions with enhanced benefits.

Lantech Longwave has found in IP Fabric an absolutely complete platform, which fulfills complex network needs through solutions like complete asset inventories and automatic network discovery through snapshots, in addition to powerful tools such as "end-to-end" path simulation, and the ability for open API integration with third parties.

For example, IP Fabric has several integrations with tools ranging from Network Management Systems like PRTG, to trouble ticketing tools, such as Service Now and Remedy".

With this partnership, Lantech Longwave can deliver complete network solutions that provide our customers with complete visibility and control of their complex network infrastructure. Lantech Longwave is fully skilled to deploy the IP Fabric solution, and our goal is to support our customers to make the most of this technology and use it to its full potential.

"IP Fabric is a network assurance platform that provides visibility intended to ease network management. This solution is vendor-neutral and covers all network devices, including firewalls, routers, switches, and wireless controllers.

Snapshots can be taken before and after a major change to evaluate impact and can also be scheduled on a periodic basis. The production of up-to-date network topologies and features that support improved lifecycle management are just some of the IP Fabric features most appreciated by our customers. IP Fabric also supports cloud services, since it is able to analyze private cloud networks, such as AWS VPC and Azure VNet, and their interconnections to on-premises enterprise networks” says Riccardo Guglielmi, Channel Development Executive at IP Fabric.

We trust that IP Fabric will help our customers to run their production networks better by minimizing downtime and ensuring they always have access to up-to-date network documentation and asset inventories.

Reggio Emilia, 18/07/2023
